Salt House® Interior

We don’t just sell salt. We create salt living

A curated collection of natural mineral salt materials for interior, wellness and project-based applications by Salt House.
Featuring tiles, bricks, blocks, slabs and custom-cut elements for architectural and decorative use.

Specification Considerations

Care & Maintenance

Technical & Project Support

No two natural salt installations are exactly alike. Natural variation contributes to the material's character and visual individuality.

Natural Mineral Salt Materials

Natural mineral salt brings geological origin, natural composition and distinctive mineral character into interior and architectural applications. Its visual identity is shaped by naturally occurring differences rather than manufactured uniformity.

Natural Mineral Origin

A naturally occurring mineral material shaped by geological formation. Geological origin, natural composition and mineral characteristics contribute to the identity and suitability of the material.

Distinct Mineral Character

Natural colour, texture and crystal structure create a distinctive material character that varies according to salt variety and geological source.

Natural Variation & Material Character

Variations in colour, texture, mineral veining, crystal formation and natural inclusions are inherent characteristics of natural mineral salt. Each piece has its own natural pattern.

Natural Characteristics Over Time

Subtle changes in colour, crystal formation and surface texture may develop naturally over time and can form part of the material's natural ageing and character.

Architectural
Product Range

Salt House® supplies natural mineral salt in a range of architectural forms, sizes and configurations for interior, wellness and project-based applications. Product form should be selected according to its architectural role, visual requirement and project specification.

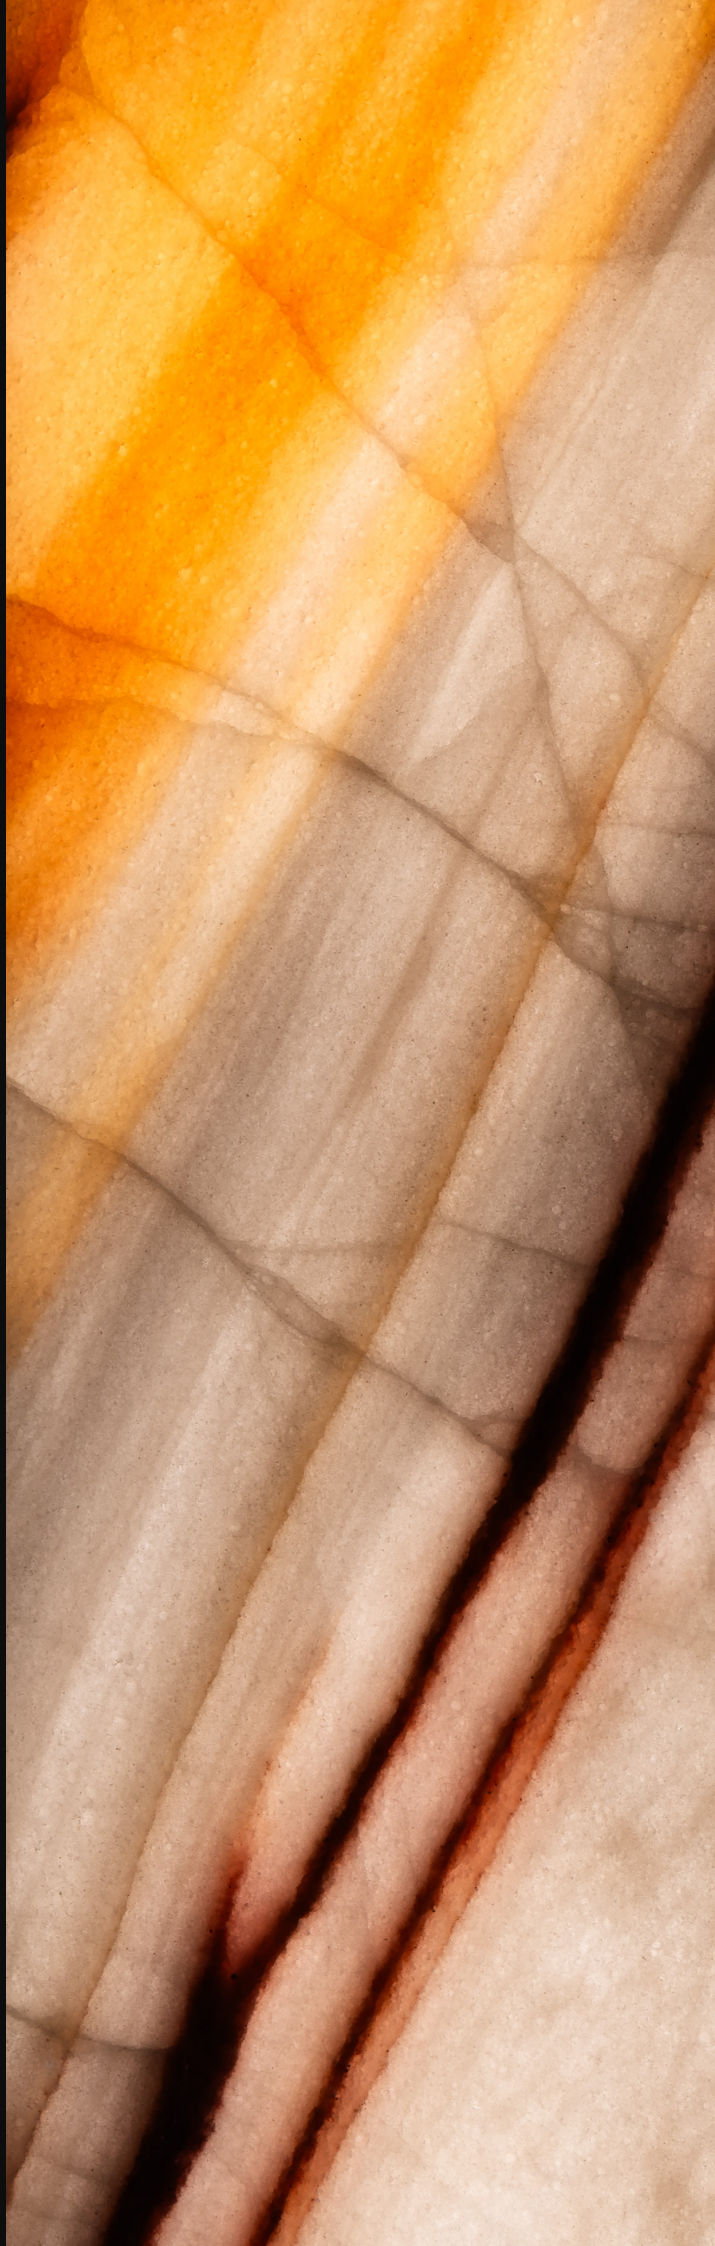

SALT TILES
Surface material for wall-facing, cladding, decorative surfaces, feature areas and large-format compositions

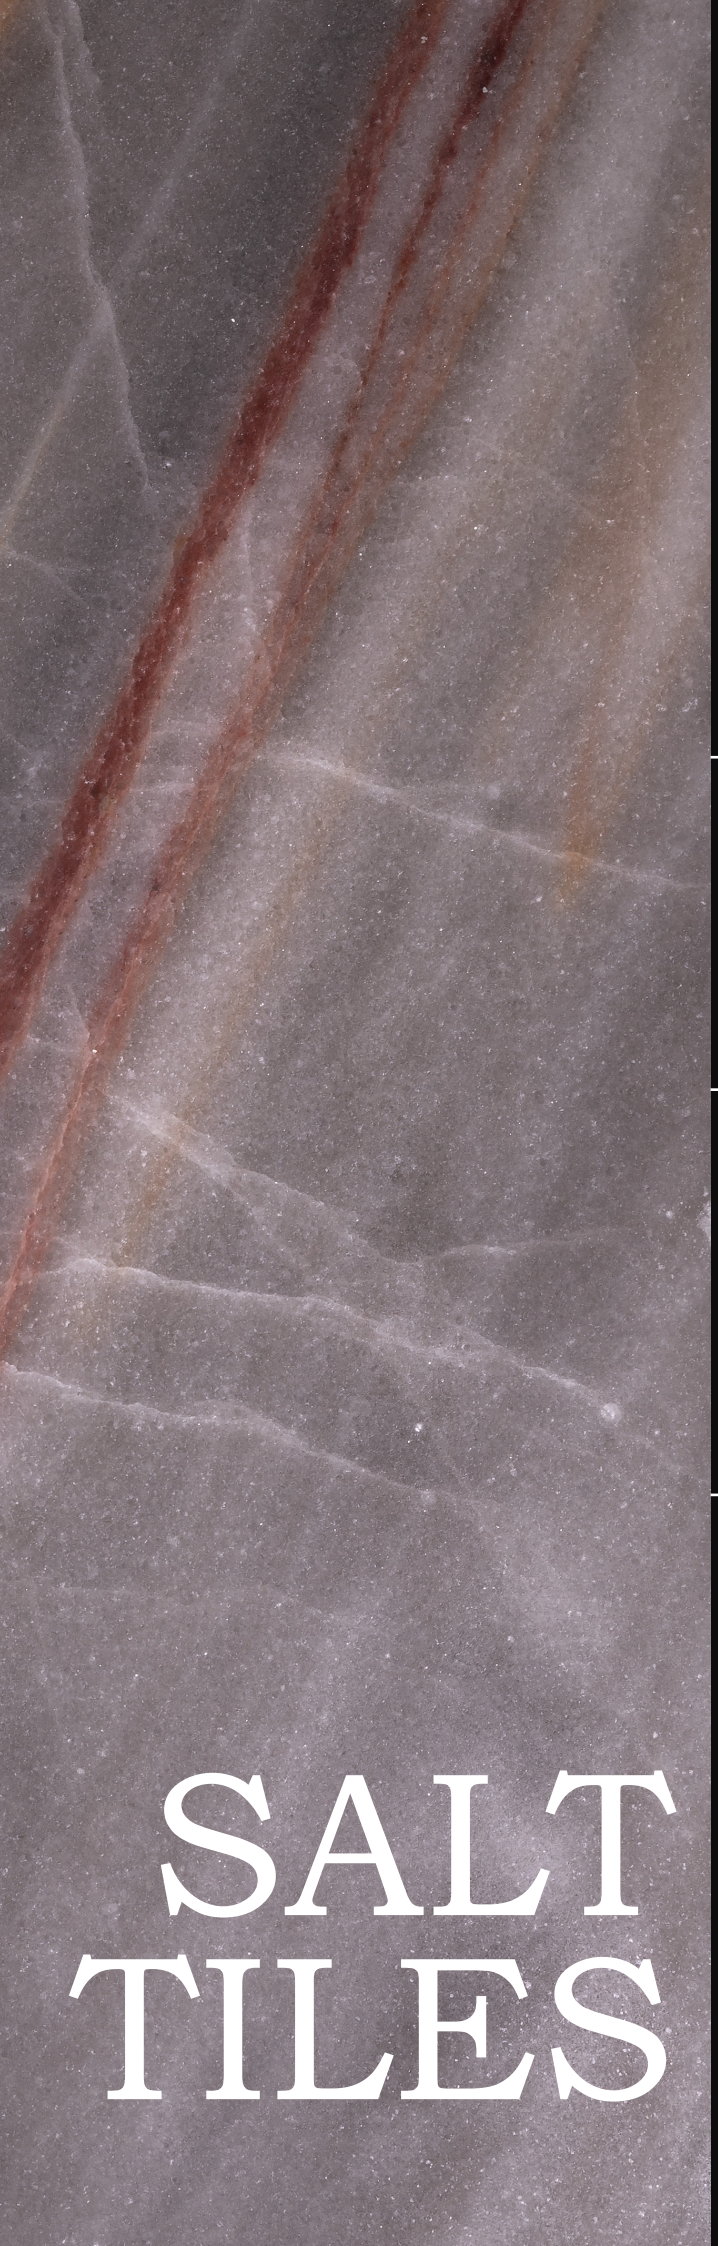

SALT BRICKS - MODULAR ELEMENTS
Repeated wall arrangements, salt rooms, feature walls, visible module rhythm and selected illuminated compositions.

SALT BLOCKS - BILLETS
Solid mineral elements offering depth, mass, substantial presence and fabrication potential.

SALT SLABS
Large-format mineral surfaces for broader areas where available slab formats are confirmed.

CUSTOM-CUT SALT ELEMENTS
Cutting, sizing, selection and related physical preparation can be coordinated to agreed dimensions, subject to product characteristics, availability and project requirements.

SALT TILES

SALT
SALT HOUSE

SURFACE MATERIAL

Natural mineral salt tiles are selected principally as wall-facing and decorative surface elements. Their large-format geometry allows the mineral character of individual pieces to contribute directly to the overall wall composition.

BEST SUITED FOR

- Wall cladding and wall-facing surfaces
- Feature walls and decorative wall panels
- Interior architecture and selected hospitality - wellness surfaces

DESIGN & SELECTION FOCUS

- Large-format and modular surface composition
- Size, thickness and approximate calculated or verified measured weight
- Surface arrangement, project environment, lighting and support verification

AVAILABLE SIZES

1200 × 500 × 30 mm
1000 × 500 × 30 mm
1000 × 350 × 40 mm
500 × 400 × 30 mm
500 × 300 × 30 mm

Salt Bricks
Modular Elements

SALT
SALT HOUSE

MODULAR ARCHITECTURAL ELEMENT

Salt bricks function as repeated architectural modules. Their design value lies in the relationship between unit size, joint rhythm, wall depth, arrangement and natural visual variation across a larger composition.

BEST SUITED FOR

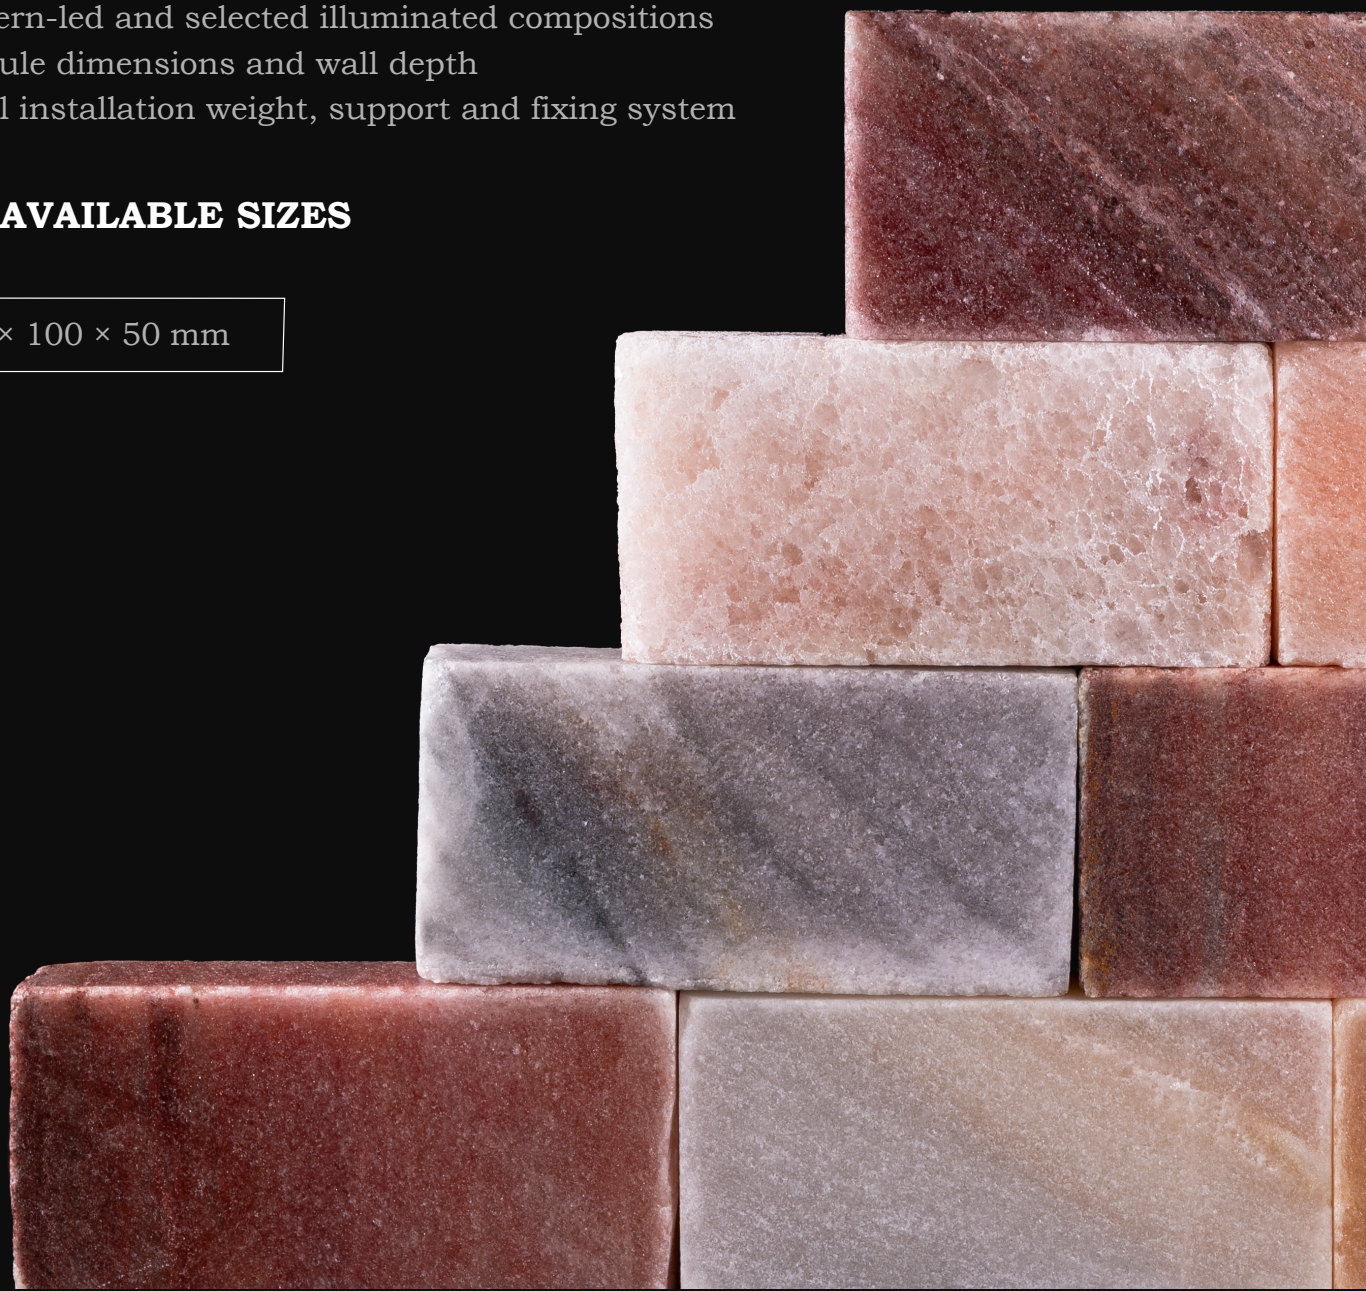

- Salt walls, feature walls and salt rooms
- Spa / wellness interiors
- Decorative wall compositions
- Selected partitions with specifically designed support

DESIGN & SELECTION FOCUS

- Repeated layouts and visible module rhythm
- Pattern-led and selected illuminated compositions
- Module dimensions and wall depth
- Total installation weight, support and fixing system

AVAILABLE SIZES

200 × 100 × 50 mm

Salt Blocks
Billets

SOLID MINERAL ELEMENT

Salt blocks and billets are solid mineral forms whose greater thickness and mass create a stronger three-dimensional presence. They should not be treated simply as thicker bricks.

BEST SUITED FOR

- Substantial architectural and decorative features
- Selected salt-wall and feature-wall compositions
- Interior, hospitality and wellness applications where solid mineral depth is desired

DESIGN & SELECTION FOCUS

- Repeated layouts and visible module rhythm
- Pattern-led and selected illuminated compositions
- Module dimensions and wall depth
- Total installation weight, support and fixing system

AVAILABLE SIZES

400 × 200 × 100 mm
300 × 150 × 150 mm
250 × 150 × 150 mm
250 × 120 × 120 mm
200 × 120 × 120 mm
150 × 150 × 150 mm
150 × 120 × 120 mm

Custom-Cut & Bespoke

SALT
SALT HOUSE

CUSTOM-CUT & PROJECT-SPECIFIC ELEMENTS

Natural mineral salt can be prepared to agreed dimensions and physical specifications through controlled cutting, sizing and related preparation, subject to material characteristics, availability and project requirements.

BEST SUITED FOR

- Custom dimensions derived from available solid salt forms
- Shaped or fabricated decorative pieces
- Project-specific mineral elements for interior compositions
- Selected sculptural forms where geometry, handling and support are technically suitable

AVAILABLE SIZES

D 150 × H 150 mm

PROJECT BOUNDARY

Custom preparation is a project-based capability, not a guarantee that every geometry or finish is achievable. Final feasibility depends on the selected salt form, natural material behaviour, required dimensions and fabrication method.

Design
Applications

Natural mineral salt brings distinctive texture, translucency and mineral character to contemporary interiors.

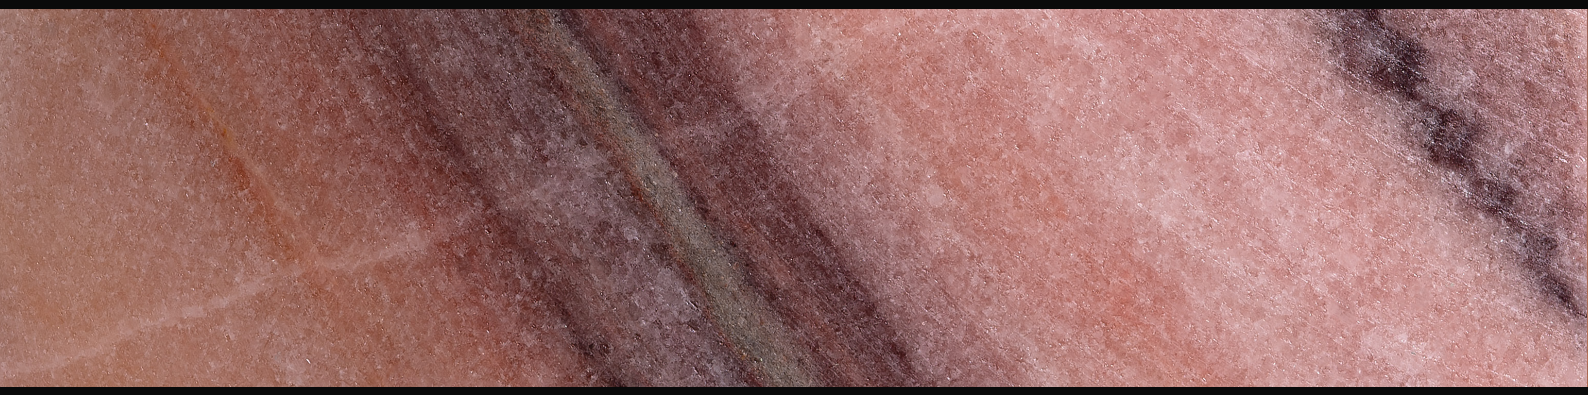

Walls & Feature Surfaces
Tiles and modular elements can create mineral wall surfaces, feature areas and decorative compositions. Product selection should follow the intended surface scale, module, depth and support strategy.

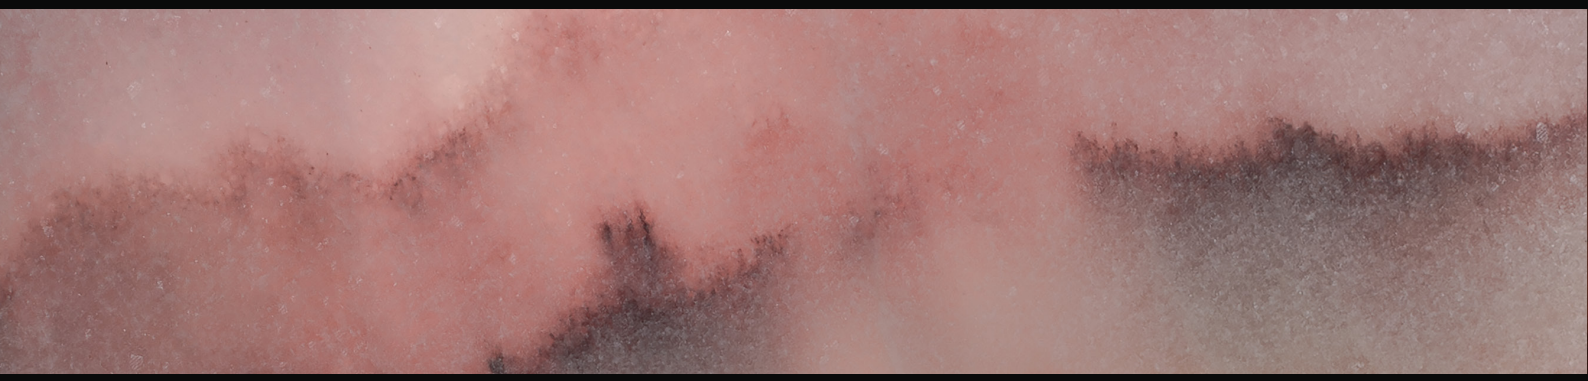

Spa, Wellness & Salt Rooms
Salt materials can be incorporated into salt rooms, spa interiors and wellness environments. Humidity, ventilation, condensation risk and maintenance access should be reviewed for the specific environment.

Hospitality & Interior Projects
Architectural salt elements can be specified for selected hotels, resorts, wellness facilities and interior projects where natural mineral character forms part of the spatial concept.

Decorative & Sculptural Features
Solid forms and custom-cut elements can support selected decorative, framed, shaped or sculptural applications where fabrication and support are appropriate.

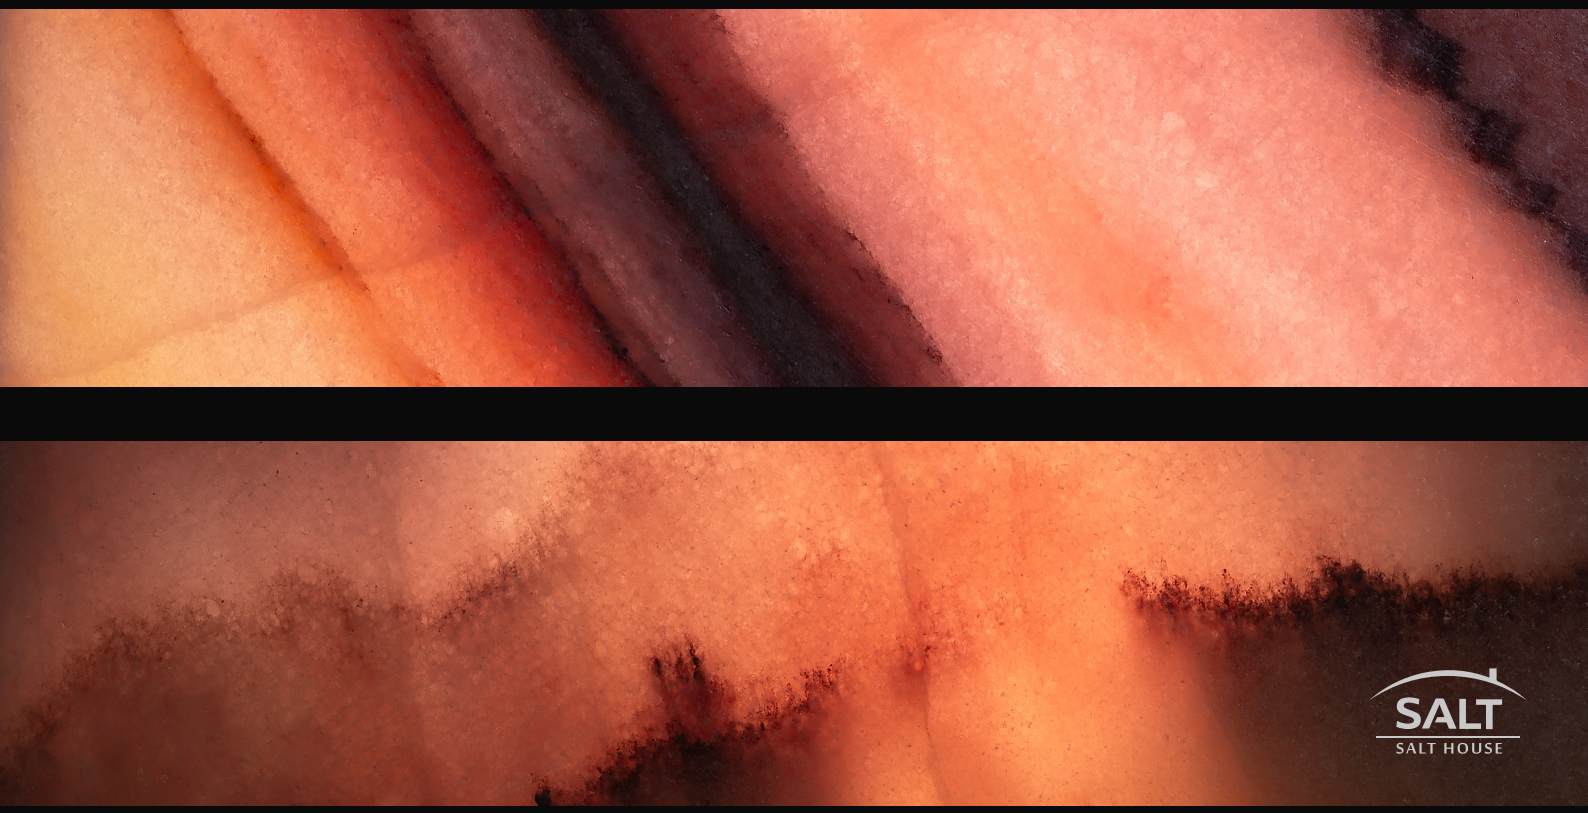

Backlit & Illuminated

Salt Features

Integrated lighting can reveal colour, crystal character and depth in selected salt installations. Lighting should be treated as a project-specific design system rather than as a universal property of every salt product.

DESIGN OPPORTUNITIES

- Backlit wall and feature compositions
- Ambient illuminated mineral surfaces
- Selected modular brick or tile installations
- Framed or integrated decorative features

VERIFICATION REQUIRED

- Translucency depends on the selected material, thickness and natural variation
- Lighting layout, heat management, access and electrical components require project-specific design
- Electrical installation and maintenance should be carried out by qualified personnel

Application
Matrix

Application	Tiles	Bricks	Blocks	Custom-Cut
Wall cladding	Primary	Suitable	Project-specific	Project-specific
Feature wall	Primary	Primary	Suitable	Suitable
Backlit feature	Primary	Primary	Suitable	Project-specific
Salt room	Suitable	Primary	Suitable	Project-specific
wellness interior	Suitable	Primary	Suitable	Suitable
Hospitality interior	Suitable	Suitable	Suitable	Suitable
Partition	Project-specific	Project-specific	Project-specific	Project-specific
Decorative feature	Suitable	Suitable	Primary	Primary
Custom fabrication	Limited	Limited	Primary	Primary

Specification
Considerations

Dimensions & Weight

Select product form and size together with approximate calculated or measured weight. For design and installation decisions, verified measured weights are preferable.

SALT
SALT HOUSE

Supporting Structure & Fixing

The supporting structure, fixing approach and total installation load should be reviewed according to product form, orientation and project conditions. Detailed engineering requirements require project-specific verification.

Environment

Natural mineral salt is hygroscopic. Humidity, ventilation, condensation risk and exposure to direct moisture should be reviewed as part of material selection.

Lighting Access

Illuminated installations should allow appropriate access for lighting components and maintenance. Electrical design is outside the scope of the material catalogue.

Care & Maintenance

SALT
SALT HOUSE

Natural Characteristics

Natural mineral salt is hygroscopic and naturally attracts moisture from the surrounding air.

Environmental conditions can influence the salt surface. Variations in colour, texture, veining, crystal formation and inclusions are natural characteristics.

Care & Protection

- Clean with a dry microfibre cloth or soft brush
- Avoid water, steam, wet cleaning and chemical cleaners
- Protect surfaces from impact, abrasion and standing water

Humidity & Environment

- Maintain relative humidity below 60% where practicable
- Provide adequate ventilation and airflow
- Remove condensation or visible moisture promptly
- Maintain stable indoor conditions

Spa, Wellness & Humid Environments

- Avoid direct steam exposure and prolonged condensation
- Remove visible moisture with a dry cloth and allow surfaces to dry naturally

Integrated Lighting

- Inspect LEDs and electrical connections every 6-12 months
- Keep power supplies dry and unobstructed
- Electrical maintenance: qualified

personnel only Natural Changes Over Time Subtle colour variation, crystal development, changes in surface texture and minor natural

irregularities may become more noticeable over time. Such changes can form part of the natural ageing and character of natural mineral salt

Technical & Project Support

Salt House supports product evaluation, specification and procurement decisions through available technical information and documentation relevant to customer requirements and intended markets.

• Product specifications: dimensions, available forms and agreed physical requirements.

• Laboratory information: available mineral, trace, microbiological or heavy-metal information where applicable.

• Documentation: available certificates, origin and supply documentation according to the product and transaction.

• Project-based preparation: cutting, sizing, grading and related physical preparation.

• Project-based supply: dimensions, quantities, preparation and packing coordinated to agreed requirements.

• Technical clarification: project-specific questions reviewed according to the intended application.
